7:00-10:00 pm

Middletown High School North Library

63 Tindall Road, Middletown, NJ

Free admission and light refreshments

Registration required at louise@LifeHealthChoices.com

What's in a vaccine? Can I see the safety studies? How many shots do our kids get today? What's the difference between the CDC-recommended schedule and the state-mandated shots for school? Are there legitimate exemptions to mandated vaccines? Can you tell me more about Gardasil and the swine flu vaccine? Founder of Life Health Choices, Ms. Habakus lectures nationwide on vaccine choices, informed consent and parenting for wellness. Informed decision making begins with an open mind to the facts, mutual respect and acknowledgement that these are difficult choices. Homotoxicology is the science of toxins and their removal within the human body. More information is available at www.lifehealthchoices.com.
